

Machine Cleaning Items

Product Information

Machine Cleaning Items

Product Overview & Key Features

Looking after and cleaning a glass or dishwashing machine, is just as important as cleaning the glasses and cups that go into it. If the machine isn't kept clean it not only looks bad but it can also leave residues of dirt and debris on otherwise clean items. Clenaware provide a number of items which can be used to keep the ware washer clean, and ensure the machine continues to provide consistent results. There are specialised brushes in stock, which are designed to clean items such as wash and rinse arms, and a smaller brush for cleaning the holes in wash and rinse jets which can easily become blocked with debris, chemical build up or scale, and a cabinet brush for wiping away any build up of dirt and debris inside the wash tank. For 'aesthetic' purposes Clenaware stock a Stainless Steel cleaner which can be used to keep the body of the machine looking like new.

Cabinet Brush

A specialist tool for cleaning inside the wash tank, without scratching the surfaces inside. It can be used to safely remove broken glass or crockery from inside the machine.

Cleaning Brush Spraybar

Specialist tool for cleaning inside the wash arms and rinse arms of the glass or dishwasher.

Wash and Rinse Jet Cleaning Tool

Specialist tool for cleaning the holes of wash and rinse jets to remove scale and debris which can block the jets of the glass or dishwasher.

Stainless Steel Cleaner

A liquid spray which can be used to remove grease and smears from stainless steel surfaces. This liquid is non tainting and suitable for use on food prep surfaces. Available as a 750ml trigger spray bottle.

Bactericidal Cleaner

A liquid spray which is safe to use in any commercial kitchen or bar area. The liquid is odour and taint free and kills 99.9% of bacteria. Available as a 750ml trigger spray bottle.
